

Award-Winning Commercial Kitchen Disinfectant

Electrolyzer Corp. won the prestigious National Restaurant Association Award for Kitchen Innovation, the association's highest award, for its

ElectroCide System, which will be given at NRA's annual convention in Chicago in May.

The patented device makes electrolyzed water which is a completely safe, non-toxic disinfecting agent that can safely be applied to food preparation surfaces, floors food preparation equipment and even food itself to completely sanitize by killing bacteria and viruses in seconds. It leaves no chemical residue, is completely safe and is a replacement for the toxic and often corrosive chemicals that have been stored and used in commercial kitchens for decades.
